REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

The prior art fails to teach a method of assembling a blower wheel, comprising the steps of: applying a first compressive axial force to a second die, wherein the ring, cylindrical blade strip, and backplate are generally compressed between the first die and the second die; applying a rotational force to the first die and the second die, wherein the first and second die are rotatably coupled by a transfer gear assembly, applying a first radial crimping force on the ring, wherein a first flange of the ring engages a first portion of the cylindrical blade strip, applying a second radial crimping force on the backplate, whereby a second flange of the backplate engages a second portion of the cylindrical blade strip, generally stopping the rotation of the first and second die; applying a second compressive axial force on the second die without removing the first compressive axial force, wherein the hub is generally deformed on one end, thereby engaging the backplate in combination with the other elements of the claimed invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
